

Job ID: 2019-002

Software Engineer – Deployment Services

Job Summary

At Cysiv, we are building the future of cyber risk management as a service. Going above and beyond a traditional MSSP, we provide an advanced co-managed platform for detecting and responding to cyber threats, backed by enrichment, intelligence and data science. We are looking for a talented engineer to join our team to help build out Cysiv's next generation, cloud-based, big data products.

As a member of our software development team, you will work on an agile continuous delivery team collaborating with designers, senior developers and architects to deliver product capabilities and features. You will be developing infrastructure for the hybrid cloud, integrating the latest security techniques and features into a scalable software-as-a-service (SaaS) offering. Leveraging open source technologies and a micro-services architecture, there is plenty of room to innovate and learn. If you want to write great code and help secure the enterprise, this role is for you.

Principal Duties & Responsibilities

- Be a part of an integrated Agile Development team, working closely with software developers, architects and data scientists from the beginning of the development cycle
- Work on a full stack development environment, building a next generation hybrid and mixed cloud SaaS security product
- Take customer requirements directly to working, sustainable designs, one customer at a time
- On occasion, you may be required to travel to client offices to troubleshoot issues
- Be focused on quality, and passionate about automation, unit testing and making code easily debugged in the field

Qualifications Education & Experience

- 3-5 years of development experience, including in-person customer support
- Development experience in Java, Python and scriptable platform languages (Bash, Powershell)
- Experience with development on a leading cloud provider (GCP, AWS, Azure, ...)
- Demonstrated secure coding experience
- Practical experience using source code and control systems, especially Git
- Understanding of agile / scrum practices and processes, and experience in an agile team environment

Skills that would set you apart from other applicants

- Experience with the Elastic (ELK) stack and Lucene based syntax / search
- Experience with serverless architectures is a real plus

Location: Ottawa, Canada
